UX Site / Application Map

UX Sitemap Description (300 words)

0.0 - The Homepage is the starting page for the application. It allows for access to the other site pages as well as serving as a landing site for application and shopping exploration. The goal of the Homepage is to give the user a welcoming experience when entering the application.

1.0 - The Account Settings allows for users to login/create an account and access all of their information that they provided on the app. They can look at current or past orders and change default shipping and card information. Additionally, they can change contact information such as email or phone number.

2.0 - From the Cart page, you can access all the clothing you have decided to purchase. You can view the companies they are coming from, the sizes you selected, the price of the item, and access all the reviews that previous customers have left for the specific item.

3.0 - On the wishlist page, you can view all the clothing items you have thought about purchasing, but haven't completely decided to purchase. Through this page, you can send your wishlist of clothes to someone (if they would like to purchase), edit your wishlist by adding or removing items from it, and accessing all the reviews that have been left on each individual item from customers that have purchased the product.

4.0 - The AI closet generator allows you to take clothes that are currently in your closet, scan them (take pictures on your phone) to the application, and automatically generate outfits based on occasion, color scheme, clothing item, and more. You can also generate your own outfits with the clothes already in your closet through the interactive page.

5.0 - The Shop page allows for users to search and shop for clothing items. The page allows you to search specific stores or clothing items while also allowing access to other pages for functionality such as adding an item to your shopping cart/wishlist or trying the item on in the AI closet generator.
