

Online Shopping

By Chanyah Johnson

Set the Scene – Searching for clothes

The storyboard represents the different stages a user goes through when searching for clothes. The scenes that I included shows different ways a user may use or access the platform for shopping. The scenes include pictures of shoppers accessing online stores from their mobile phone on the couch to looking through the online shopper reviews. Secondly, the screens provided show different screens and functionality the user may see when shopping on our application. Overall, the storyboard represents the "searching" use case accessibility and functionality.

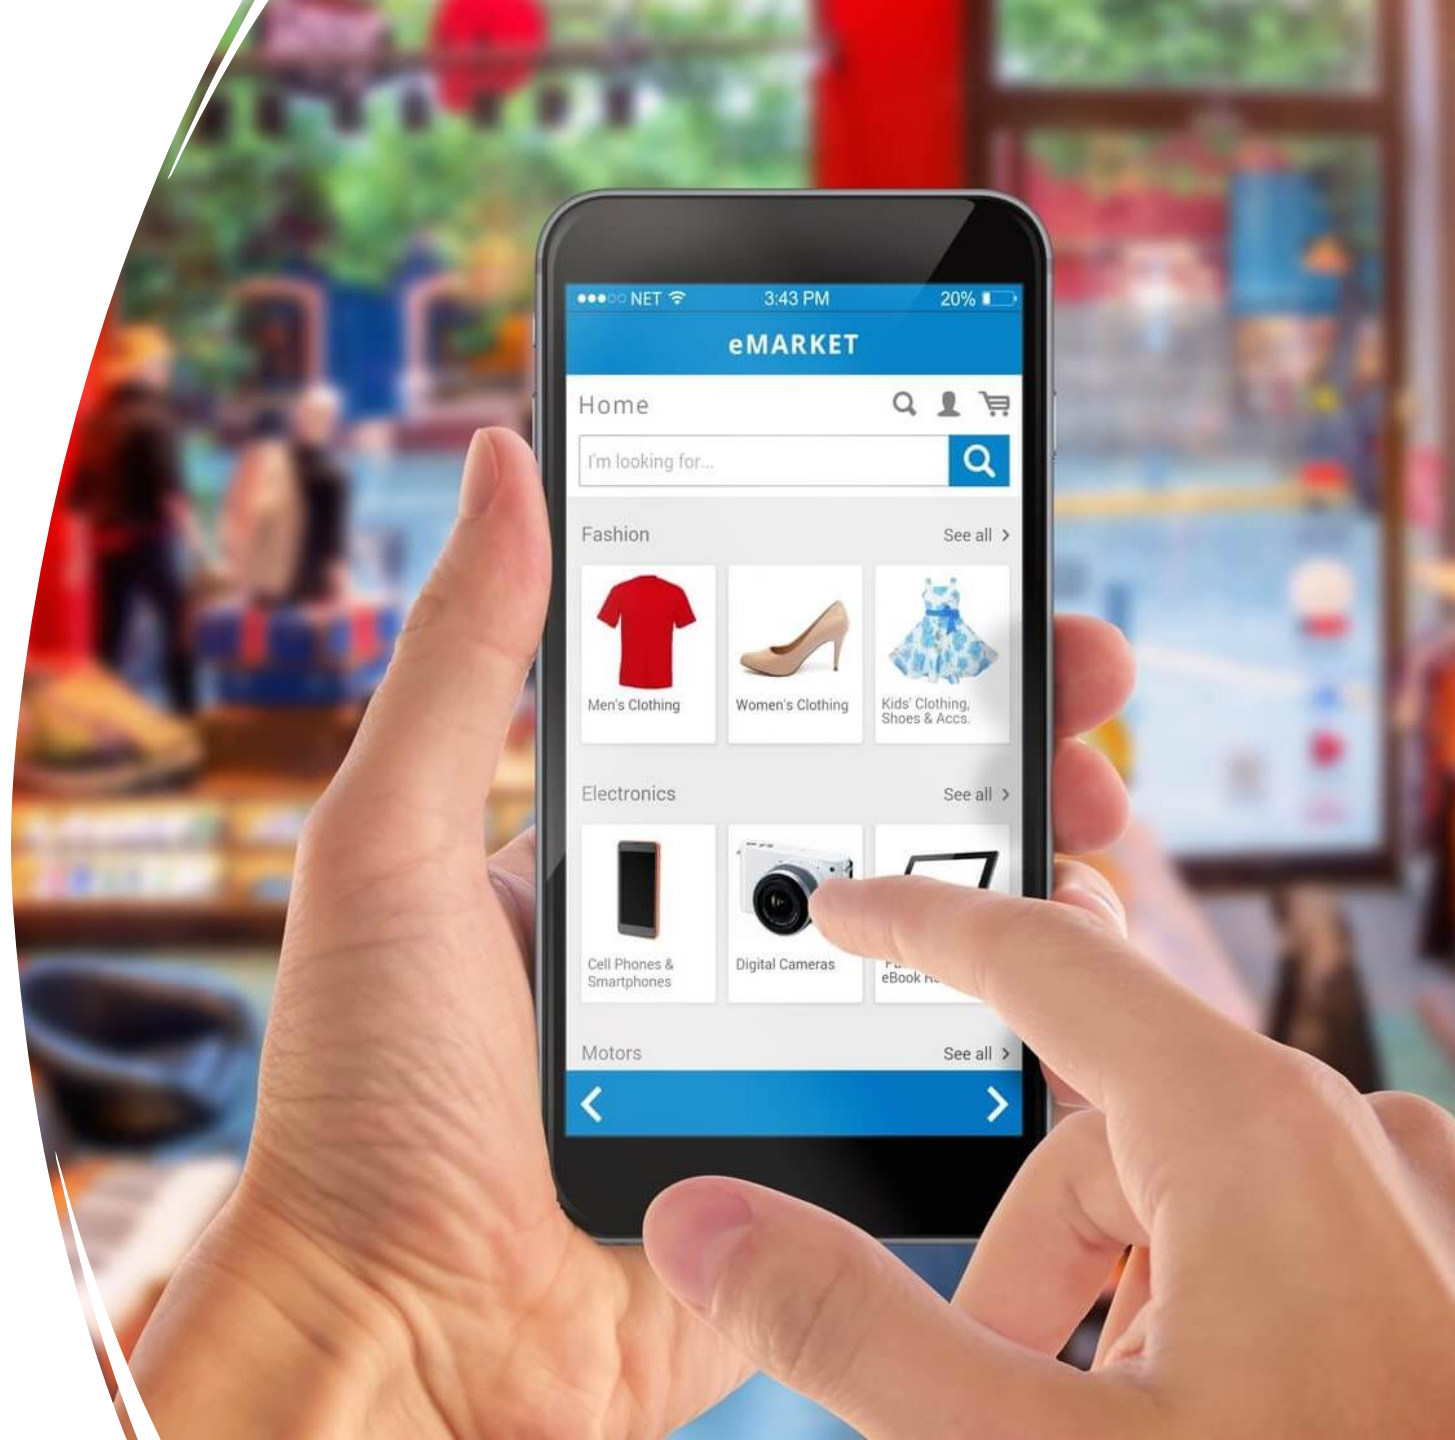

Scene 1

This scene shows someone shopping from the comfort of their couch.

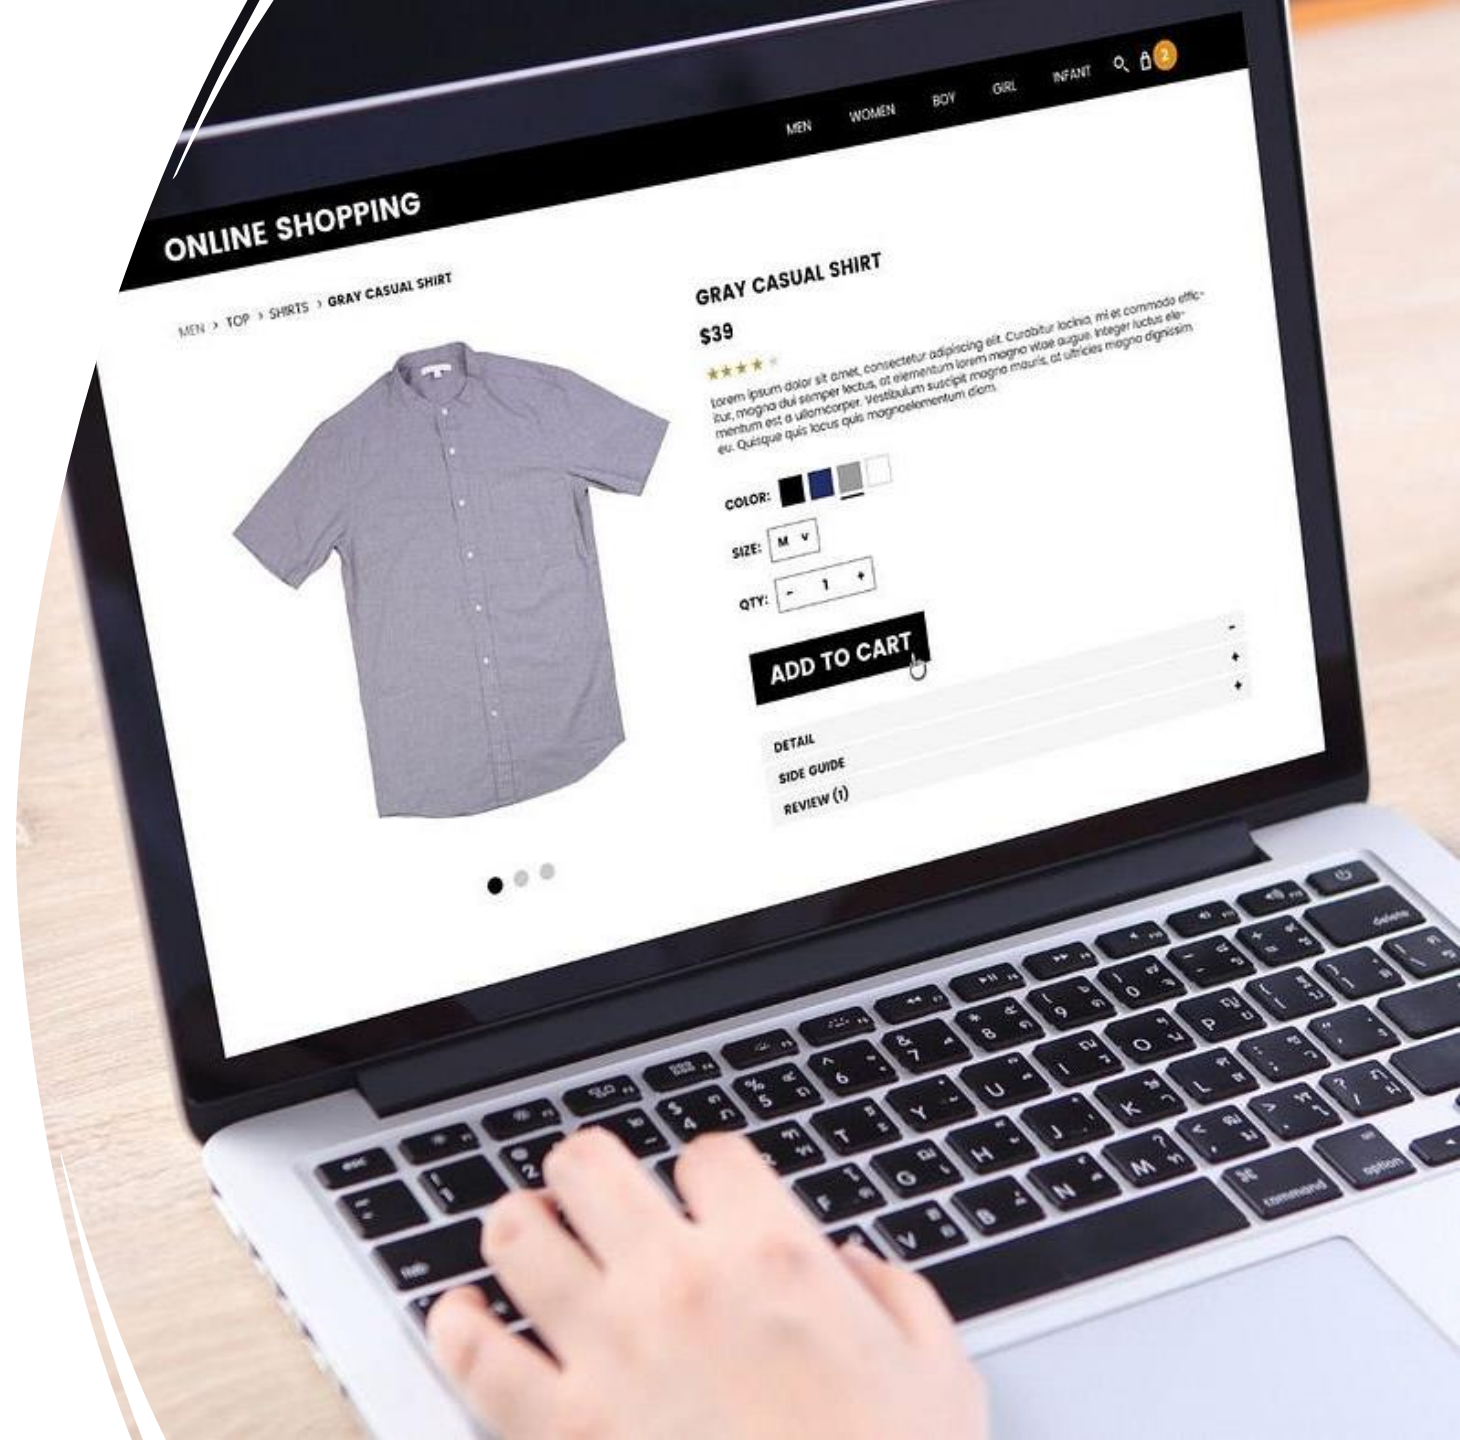

Scene 2

This scene shows how accessible a store is from the palms of someone hand.

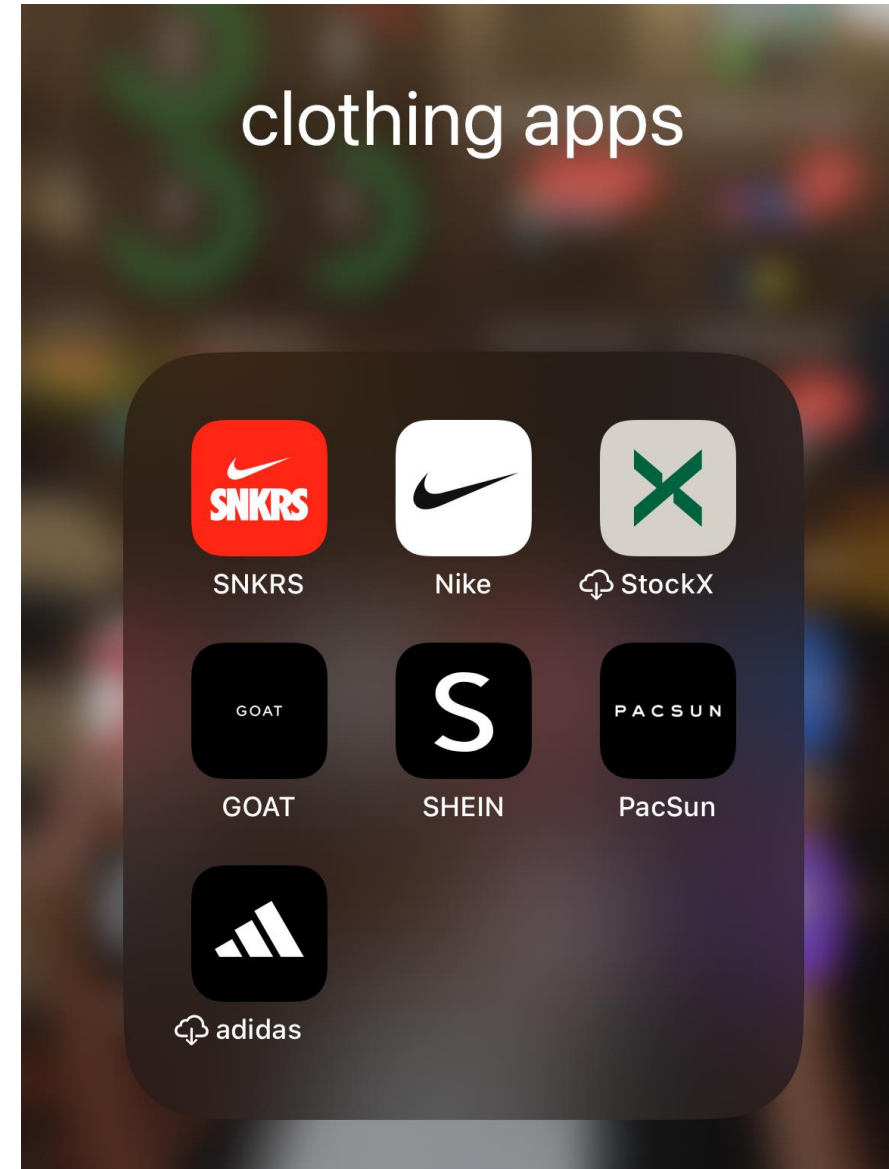

Scene 3

This scene shows the different features and functionality allowed when searching for a shirt online.

Scene 4

This scene shows how someone may have multiple clothing apps on their phone when buying clothes.

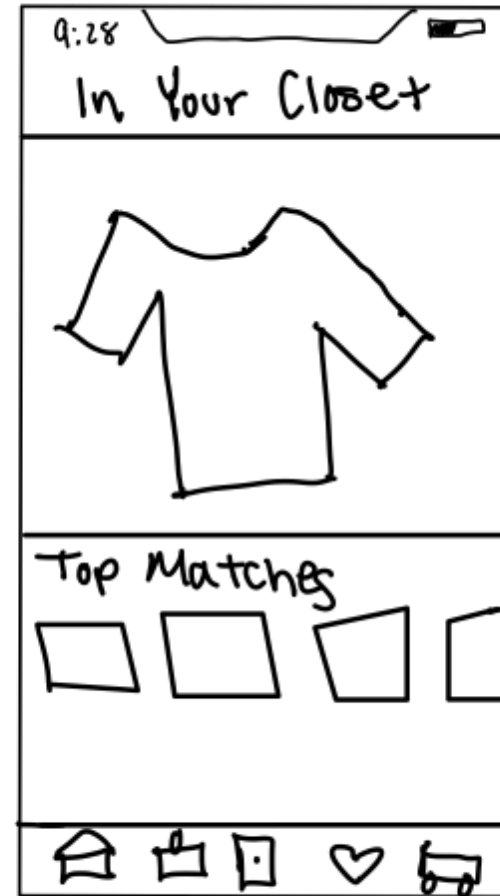

Screen 1

This Screen shows a search screen for if a user was to search a black shirt. When the user searches for a shirt the page shows black shirt recommendations based off the top rated, best deals, and fast shipping.

Screen 2

This screen shows a what it would look like for a user to search for items based off what is in their closet. The product recommends clothing items based off the scanned shirt that came from the users closet.

Screen 3

This screen shows that a user can search for clothes from multiple different stores in the product.

Screen 4

This screen is what is shown when a user is looking at a specific item. It allows a user to choose a size or color, add to the cart, and look at reviews.
